

TIBCO PortalBuilder

In today's fast-moving marketplace, people inside and outside of organizations require and demand more complete and timely information and access to applications. At the same time, they run the risk of being overwhelmed by information of varying significance or relevance. To meet these challenges organizations must give stakeholders easy access to customizable views of internal and external resources such as content, services, applications, and business processes.

TIBCO PortalBuilder® software unlocks the potential of assets trapped within functional silos, presenting personalized views of integrated data, systems, and business processes to various constituents – employees, customers, partners, and suppliers. PortalBuilder can play an integral role in an enterprise service-oriented architecture (SOA), by enabling easy assembly of composite applications that span multiple heterogeneous systems and deliver targeted, context-specific information and application functionality to users.

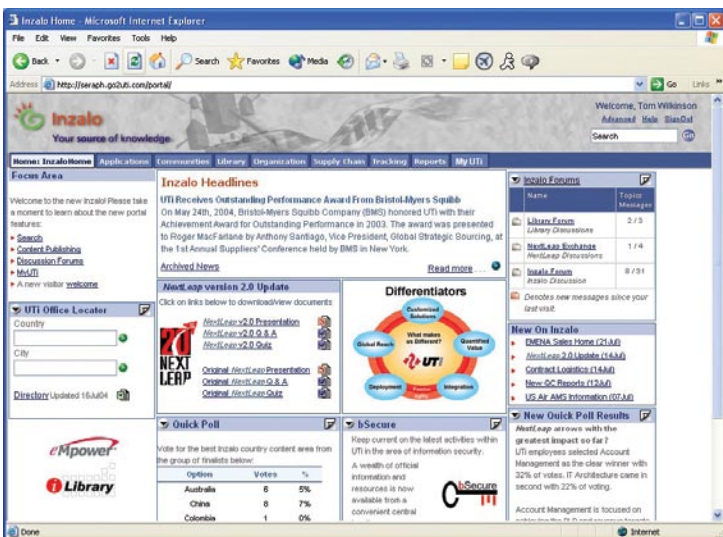

Based on industry standards and utilizing intuitive configuration-based administration, PortalBuilder enables organizations to rapidly develop and deploy portals without significant coding, ultimately reducing time, cost, and risk. Over 400 customers rely on PortalBuilder for a variety of different portal types, including employee intranets, customer extranets, partner extranets, business process portals, and executive dashboards. PortalBuilder exposes and extends the value of current investments while providing a standards-compliant environment for future enhancements.

AT A GLANCE

TIBCO PortalBuilder is a robust, proven enterprise portal platform that enables organizations to effectively and efficiently deliver content and applications to different audiences via secure and fully customizable web-based interfaces.

BENEFITS

- Improves end user productivity and satisfaction by presenting a unified view of a wide range of information and applications in one central, secure web-based location.
- Increases visibility into processes, and enables organizations to improve the efficiency of processes in order to, for example, improve customer service.
- Provides capability to deploy rich client portlets for a level of functionality and responsiveness generally associated with desktop applications.
- Lowers total cost of ownership and accelerates return on investment with intuitive wizard-driven interfaces that let business users rapidly configure portals without time-consuming and error-prone coding.
- Reduces risk by eliminating vendor lock-in with support for a wide range of standards, infrastructure technologies, and best of breed components.
- Simplifies the integration of content and applications – from original source systems as well as other standards-compliant portals – thanks to an extensible and standards-based architecture.

UTi Worldwide's employee portal dramatically reduces development time by enabling IT to reuse templates for similar sections. Team members report up to an 85 percent reduction in effort to deliver new intranet pages and functions.

ATTRIBUTES & CAPABILITIES

Powerful Integration of Systems, Services, and Processes

PortalBuilder enables customers to leverage existing systems and processes by easily incorporating them into the portal.

- Range of native integration capabilities, as well as seamless integration with TIBCO's comprehensive set of business integration and process management software.
- Fully supports JSR 168 and WSRP for integrating a wide variety of content and applications, as well as for consuming and syndicating portlets from other WSRP-compliant portals.
- Point-and-click discovery and presentation of internal and external web services.

Integrated Content Management and Collaboration

PortalBuilder includes intuitive content management and collaboration capabilities, and also supports the use of third-party solutions.

- Easy-to-use content creation and publishing tool enables business users to author and manage portal content, ensuring that portal content remains fresh and relevant.
- Collaboration tools, including user-managed communities and discussion forums, promote stronger working relationships and increase productivity.
- Supports leading third-party content management and collaboration tools for organizations with specific requirements or existing installed solutions.

Administration and Security

- Intuitive web interface enables delegated administration. This simplifies portal management by giving select individuals control of different functionality or areas within the portal.
- Multiple authentication methods, native single sign-on, and out-of-the-box support for leading security vendors.

Languages

Enables multi-language deployments with support for a variety of languages such as:

- Chinese, Simplified Chinese, Korean, German, French, Spanish, Japanese
- Portal can be easily localized in other languages as well

Standards

Extensive support for leading standards.

- Complete support for JSR 168 and WSRP (consumer and producer)
- SOAP, WSDL, UDDI, XML, Java, Java EE, HTTP, etc.

"Having a single portal for T-Systems employees helped us to build a consolidated corporate identity and enabled collaboration from any location – in more than 20 countries worldwide."

- Ellen Walther-Klaus, Senior EVP of Web Enabling and Relationship Management, T-Systems

PLATFORM, STANDARDS AND SECURITY

- **Operating Systems:**
Windows, Solaris, HP-UX, AIX, Linux
- **Servlet Engines:**
Apache Tomcat, Sun Java System Web Server, BEA WebLogic Server, IBM WebSphere Server
- **Databases:** Oracle, Microsoft SQL Server, IBM DB2 UDB
- **Directory Servers:**
Sun Java System, Microsoft Active Directory, Novell eDirectory
